Eshan Garkhedkar

Las Vegas, NV | U.S. Citizen | eshangark@gmail.com | linkedin.com/in/eshangark | github.com/eshangark | eshangark.github.io

Education

- **University of Virginia, College of Arts & Sciences** — Charlottesville, VA
  Bachelor of Arts in Mathematics, Minor in Computer Science — *Expected May 2030*
  Relevant courses: Data Structures & Algorithms, Calculus 1.

Projects

Wharton Data Science Competition | Top 25 Semifinalist — Feb 2025 – Apr 2025
Multi-Factor Basketball Ranking & Win Probability Model

- Developed a multi-factor basketball ranking and win probability model in Python using Whole-History Rating (WHR), Bradley-Terry, and dynamic Elo to analyze 5,200+ NCAA Division I games.
- Engineered feature pipelines incorporating 40+ variables, 8 advanced performance metrics, and contextual factors including strength of schedule, travel distance, rest differentials, and time-zone effects; optimized model parameters using Bayesian optimization and regression analysis across 6M data points.
- Validated predictive performance through RMSE minimization. Achieved a top 25 Semifinalist finish out of 500+ teams across the world.

Dynamic Traveling Salesman Problem Solver — Jan 2025 – May 2026
Algorithm Researcher | IB Computer Science Extended Essay

- Designed and implemented Genetic Algorithm (GA) and Ant Colony Optimization (ACO) solvers in Python, benchmarking their performance on the Dynamic Traveling Salesman Problem using TSPLIB datasets containing 14, 52, and 100-node instances.
- Developed an experimental framework that generated 10 dynamic snapshots per dataset and executed 5 repeated trials per snapshot, evaluating route optimality and runtime under controlled conditions using custom Python tooling.
- Authored a 4,000-word research paper earning an IB Grade A, demonstrating that GA achieved up to approximately 37% shorter routes than the baseline Ant System on larger problem instances while ACO maintained lower computational runtime.

Arduino Projects Repository | GitHub — Sep 2024 – May 2025

- Developed and maintained an open-source repository of 13 embedded systems projects totaling 3,000+ lines of C++ and Java, integrating 10+ sensors and actuators, complete with documentation and custom Processing GUIs.

Work Experience

Cavalier Computers | University of Virginia retailer for computers and accessories.
Technology Sales Associate (Student Worker) — *Sep 2026 – Present*

- Assess customers' computing needs and explain product specifications and trade-offs, recommending computers and accessories suited to academic and everyday use.
- Process purchases through the point-of-sale system, providing accurate checkout and attentive customer service.

Spatialty AI | AI startup developing geospatial analytics and rooftop solar assessment solutions.
Research Analyst Intern | Pune, India — *Jun 2025 – Aug 2025*

- Conducted competitive market analysis of 8 leading solar technology companies, evaluating pricing strategies, AI capabilities, and product positioning to support commercial strategy development.
- Synthesized insights from 50+ industry reports, government policies, and market datasets into segment-specific pricing recommendations spanning residential, SME, commercial, and public-sector customers.
- Delivered four research reports, one final strategy report, and executive presentations translating technical and market analyses into actionable recommendations for product positioning and pricing strategy.

Leadership & Activities

Project I.C.E. (Indus Carbon Emissions) — Sep 2025 – May 2026
Co-Founder & Data Analyst

- Co-founded a campus sustainability initiative, leading carbon-footprint analysis across a 36-acre campus and cataloging 1,200+ trees across 40 species using IIT-derived sequestration models.
- Designed an interactive dashboard and organized a 75+ participant innovation competition promoting data-driven sustainability initiatives.
